Mr Peterson
Tree Foundation
Apple Way 1
69420 Cupertino
SF, USA

Dear Mr Peterson

As you are probably already aware, many tree farming plants all across the globe lack major automation. Many workers are reported to be struggling to keep up with their daily schedule whilst completing their daily chores and tasks that mainly consist of raising trees. Many are reported completely exhausted and unable to keep up with the demands of constant deforestation and lack of resources, which contributes to the absence and inadequacy of tree population in areas that are known for tree scarcity. That is currently amongst the leading problems of today's reforestation organisations, that probably affects your association as well; the insufficiency of automation.

That's where our part comes in. Our company, 82Motion, specialises in robust and large-scale robotic automation of everyday activities and we've prepared a system for automatic tempering and planting of trees on a large scale. Our cutting-edge technology allows our customers an easy integration into their existing machinery and provides a feature-rich and modular interface for fast and optimized planting. Both software and hardware of the machines in question comes exclusively from our hands and minds and we develop almost every piece of the so-wanted puzzle. Having just recently becoming a bigger part of the engineering firms in Slovenia, we're ready for even more challenges.

We think, that our products can cope with the harsh environment and working schedule with as little maintenance as possible in an astonishing ratio of 50 human workers per machine. In other words, 50 people can focus on logistics and other important tasks while the machine takes over and takes care of the physical work. Our 24/7 in-person support will help you train machines and teach your technicians about every aspect of the software and hardware, and will provide you with every datasheet required to disassemble and reassemble every part, including software. That means that your tech staff will be able to service every machine without the need for hiring members of our team.

Furthermore, another key point is our nature-loving heart. Our company and your organisation are both known for the fear of poisoning our human environment, and we are both well respected for that. So we think we'll make a great part of your team and hope for cooperation in the near future.

If you have time, we recommend checking out our previous achievements on our website, <http://82motion.tk/> and see for yourself. We hope you will decide we are competent enough and will choose us for your partner in the complete renovation of reforestation as we know it, that would take place in the very near-future.

We are prepared to joining you not only by paying membership fees, but administering you with lots of engineering aspects that are yet to be discovered by other companies and use thoroughly our unique inventions and concepts, as well.

In case you have any further questions regarding our offer, please don't hesitate and contact me or our company's respected personnel, as soon as a something begs your mind.

We are more than excited to hearing
from you and are eager to receive your
feedback.

Yours sincerely,
Anton Luka Šijanec,
82Motion
